

## Seven (7)days Prior to Procedure

### SCALP MICROPIGMENTATION

All permanent cosmetic procedures are a multi-session process.

While these deposited pigments may initially simulate the exact color and tone desired, they will not always remain a perfect match. Pigmented colors are constant, while your own skin color will vary depending on exposure to cold, heat, sun and circulatory changes.

1. Each procedure may take longer than expected to be completed under some circumstances.
2. Come with a clean head. Dry hair, freshly washed within 24 hours. 3. Buzzed/Shaved Clients; shave just **BEFORE** the procedure.
3. It is recommended that you plan these sessions accordingly, avoid scheduling just before a major event such as a wedding or a sunny/beach vacation.
4. Refrain from the use of alcohol, aspirin, aspirin-containing medications, ibuprofen, or other blood thinning medications for three (3) days before. Also some supplements like Tumeric and Fish Oil. Refrain from judgment - altering drugs for at least 24 hours prior to the procedure. **No medication should ever be discontinued without first consulting with your physician.**
5. Avoid topical products such as Rogain or Propecia for seven (7) days prior to procedure and thirty (30) days post procedure. These topical products will affect the pigment.

#### \*INTERACTIONS WITH OTHER PRODUCTS

- Minoxidil/Finasteride
  - No topical treatments for seven (7) days before first (1) treatment and thirty (30) days post last follow up.
- Antibiotics/Prednisone
  - Your body is currently in defense mode if you are on these, it will reject the ink.
